

## Broadband access wherever there is electricity

### A practical solution

- ▶ Broadband to remote places
- ▶ convenient & easy
  - uses existing technology
- ▶ meets local authority targets to bring Broadband to all

**WINNER : TSB High Growth  
Potential Business 2010  
Highly Commended:  
Green Technology Award**

Where Broadband cabling is an issue, we can connect via the existing electricity infrastructure and send a Broadband connection.

In real terms, this means that if Broadband can't be supplied to the more remote areas of the UK, for economic and practical reasons, it can be accessed via existing powerlines.

The government's commitment to provide Broadband to all by 2020 will only become a reality where innovative technology is considered a viable option.

With reasonable speeds of up to 80 MB, electricity powered Broadband is an ideal alternative to the cabled service.

Our technology is tried and tested and used extensively in Italy by Telecom Italia.

**Streetlighting Control • CCTV • Broadband • Vehicle Battery Charge**
