

Powering vehicles of the future... today

New technology

vehicle battery charge via streetlights

convenient & easy

- uses existing technology

potential revenue stream

for local authorities

WINNER : TSB High Growth
Potential Business 2010
Highly Commended:
Green Technology Award

The production of battery operated vehicles is set to increase as a result of spiralling fuel prices and a variety of government incentives to encourage consumers to opt for a greener method of travel.

Battery charging will become an issue for local authorities as demand increases. A simple solution is to provide charging points via existing streetlight technology.

Minos Systems UK can adapt existing streetlight stock with a simple, secure charging box that can be accessed via a swipe or debit card system.

Access is quick and easy, allowing consumers to recharge their vehicles from the national grid infrastructure.

An additional benefit to the local authority is the ability to charge for this service - therefore providing a revenue stream as well as a valuable, essential public service.

Streetlighting Control • CCTV • Broadband • Vehicle Battery Charge
